1. Project

Title	[TBD]
Team	3GG: 2 Devs, 2 Artists, 2 Designers
Engine	Unity
Platform	Multiplatform
Audience	PG-13
Jam theme/ category	Play to Prevent
Repository	Github
Contact	denisfirmansyah55@gmail.com

2. Game Overview

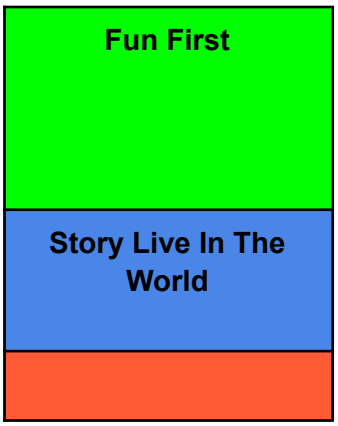

Deploy and upgrade your Operators. Hold back enemy waves until your research facility can extract their researched parts. Complete optional objectives to unlock stronger units and strengthen your defenses. Guided by your corporation’s intelligence, protect a research project that promises humanity a future of better life. But as the conflict unfolds, will defending humanity’s future mean the same thing as carrying out your orders?

3. PVE and Design Pillars

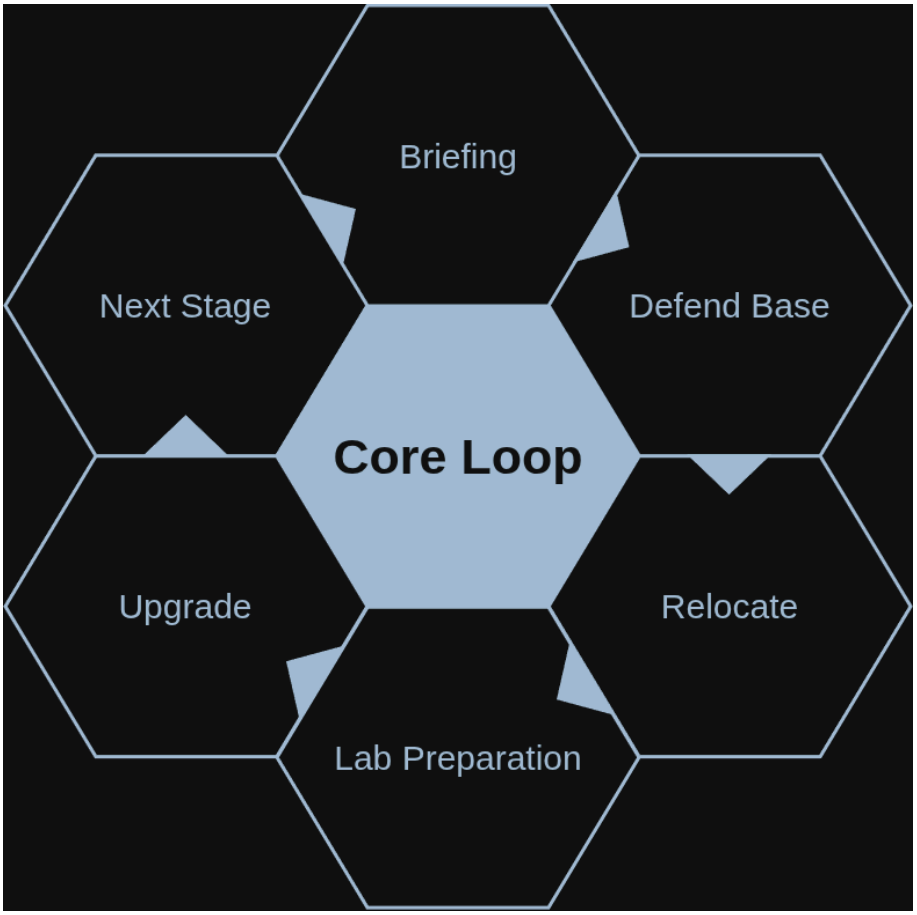

PVE

Stage	In this story
Hook	Amnesia (a gap an authority fills), gratitude for being saved, special status as sole survivor.
Isolation	The facility, controlled information, "them" defined by the institution, amnesia as isolation from MC's own past.
Fantasy	Purpose, heroism, belonging, "saving people."
Escalating commitment	Tutorial, then stage, then part. Each stage should cost the player something to walk back from.

Design Pillars

4. Core Loop

5. Key Mechanics

Mechanic	Description
Unit Placement	The player deploys staff units onto valid map tiles by selecting a unit from the UI and choosing a suitable position. Placement consumes stage resources, and units can be rotated to face a chosen direction before deployment. The number of deployed units is limited.
Unit Attack	Deployed staff units defend the facility by attacking approaching enemies according to their assigned roles, attack range, and combat behavior. Their effectiveness depends on their positioning and upgrades.
Unit Retreat	The player can withdraw deployed staff from the battlefield, but removal requires processing time and may depend on

	specific conditions, such as having a medic present. This prevents instant repositioning and makes deployment decisions more consequential.
Wave Spawner	The wave spawner controls the appearance and timing of enemy waves during a stage. It begins spawning enemies when the battle phase starts and stops when the stage ends.
Enemy Behaviour	Enemies advance toward the facility and threaten its base health. Their movement, appearance, and combat behavior communicate their nature and difficulty, while subtle environmental and visual details provide clues about the story.
Win-Lose Condition	The player wins by surviving until the stage timer expires, allowing the facility to relocate. The player loses if the facility's base health reaches zero. Winning grants completion rewards and may unlock new staff, while losing ends the stage unsuccessfully.
Economy and upgrades	The player manages stage resources to deploy staff and uses earned research credits to improve units between stages. Resources regenerate during a stage, subject to a maximum capacity. Completing stages provides additional rewards, while optional objectives can unlock new staff.
Level Selector	The player selects an available stage from the level selection interface. Each stage defines its map, starting resources, base health, survival duration, enemy waves, briefing, and completion outcome.
UI Control	The interface provides access to unit selection, deployment, resource and base-health information, stage progression, dialogue, and game-over feedback. UI interactions allow the player to manage the defense and understand the current stage's status.

Cutscene	Story sequences are presented primarily through text-based dialogue at the beginning and end of a stage. The opening briefing provides the handler with information from the corporation, while the ending depicts the facility's relocation or the consequences of failure.
Roaming Control : Interact, Movement	The player controls the handler's movement through the game environment and can interact with nearby characters or points of interest. This mechanic supports environmental storytelling and provides context beyond the tower-defense gameplay.
Interact with Object	The player interacts with designated objects in the environment to trigger events, access information, or progress through specific sequences. Objects can provide contextual details about the facility and its operations.
Choice log	The game records important player actions and decisions throughout a stage, including staff deployment, stage outcomes, and relevant events. These records are presented during a review sequence, allowing players to compare their actions with the eventual consequences.
Persistence	The game stores relevant progression data, such as completed stages, research credits, unlocked staff, and stage records, according to the current progression design. During the prototype, individual stage combat state resets between stages, with cross-stage persistence limited to the systems explicitly implemented.

6. World, Narrative, and Educational Intent

World

Cold War - 1970s

Narrative

Educational Intent

Theme: MC, and with MC the player, chooses not to blindly follow: to ask and to be critical. It is **not** a late twist. The player knows to be suspicious from early on, and the test is what they do with the suspicion.

Commentary: The story comments on social structure and hierarchy: how institutions (companies, governments, social organizations) take advantage of people. It presents the pattern of violent-extremism recruitment (hook, isolation, fantasy), why some people are susceptible, and how they can fight back.

7. Visual and Audio Direction

Visual

3D Pre Rendered world + 2D Character

1. Main Character 2D
    - White Shirt with sleeve
    -
2. Staff Unit 2D
    - Lab Coat
    - Blue Shirt
    - Helmed and Armored for combat
3. Enemy Military 2D
    - US Military
4. NPC 2D
    - Lead Scientist, Lab Coat, Glasses
    - Boss, Black Trench coat

5. Map 3D
    - Main Facility
    - Facility 1 : Forest
    - Facility 2 : Swamp
    - Facility 3 : Tundra
    - Facility 4 : Buried City
    - Facility 5 : Desert
6. UI

Audio

Music

1. Main BGM Direction: Weary - Tender
2. Exploration BGM Direction: Friendly + Inquisitive
3. Combat BGM Direction: Obedient + Zealous + Vicious

SFX
